Message = Dear members of the West tisbury select board,

I'm urging you to start being interested in pursuing municipal fiber optic broadband ISP network connectivity by partnering with ripple fiber Inc or any other fiber optic Internet service provider by forming a broadband advisory committee similar to what the town of wilbraham, MA did because the download and upload speeds provided by Comcast are way too slow and unusable at Martha's vineyard regional high School because Comcast doesn't provide guaranteed multi gigabit fully symmetrical download and upload speeds using NG-PON2 fiber to the premises (FTTP) backhaul infrastructure to all residents, schools, small businesses, government buildings, and the library in the town of Chilmark because Comcast has no incentive to upgrade their existing hybrid fiber coax infrastructure in the whole entire town of Chilmark because there is no actual fiber optic broadband ISP network competition on Martha's vineyard which is a major concern for the island of Martha's vineyard because Comcast doesn't care about their customers because I'm sick and tired of dealing with slow and unusable Internet connectivity on Martha's vineyard.

Regards,

Jack Dunk
