Project Description

The proposed project involves two (2) primary components:

- I. Vegetation management and circulation paths: Invasive tree and Brush removal removal and management of invasive vegetation throughout the property as well as constructing access paths and a small bridge to access the remote portions of the lot in order to complete the work. All paAll material resulting from the cutting will be removed from the site. There are two types of paths to be cut: 1 - 6 foot wide paths to support a small tractor or ATV and 2- 4 foot wide walking access paths . All brush-cutting will be done by walk behind brush cutters and hand tools. Tree and brush removal will also be done with hand tools and chain saws. The list up of species to be maintained is included herein this notice of intent. The proposed stream crossing will be accomplished with a small timber bridge. The bridge will be 6 feet wide and all bridge timber will be non-leaching hardwood such as locust or cedar. Bridge posts will be supported by a pin footing type system.
- II. Utilities: The existing utility service for the property is located on over-head poles. This proposal involves the removal of a section of the over-head wires and poles and placing the utilities below-ground. The trenching for the utilities will be done with a small excavator.
