80 Oak Lane access road and shed area planting

The objective in this scope of work is to re-create the native landscape elements present within the property of 80 Oak Lane West Tisbury. At the completion of the landscape installation, Contour landscape Construction, in agreement with the homeowner, has proposed to amend the areas disturbed to access the work site. The following measures have been accounted for in the landscape plan.

1. A section of existing undergrowth woodland mat has been preserved on site and will be transplanted to the location of the current access road and future shed perimeter.
2. Evergreen trees (White Pine and Cedar) will be placed precisely on site to block any view channels from Oak Lane and Neighboring houses toward the shed area. Native shrub mix of bayberry, Clethra, Inkberry, Blueberry to be added into immediate shed perimeter.
3. Mixed Fescue grasses will be planted using hydroseed on disturbed topsoil areas to create meadow on the work site perimeters where lawn is not desired.
4. All landscape elements to be maintained by Contour Landscape Construction after initial installation.
