

Mill Brook Watershed Management committee, working group

1/13/24 minutes, approved 3/2/24

Present:

Prudy Burt, Julie Russell, David Bouck, Bill Wilcox

Members discussed thoughts/goals to be included in an email to consultant Neal Price. This communication is intended to clarify expectations in regards to the final report that Neal is working on.

These include interpretation of data results for stream flow measurement, rainfall amounts, water quality sampling lab reports and water chemistry field measurements, stream temperature and water pressure, macroinvertebrate sampling results, as well as tying all these issues into climate change, and resiliency for the watershed in face of same.

We will also ask Neal for a timeline for completion, and confirm that we are on budget with remaining community preservation act funds.

Prudy will compile this outline and send to Neal, copying members of this working group.
