

	<b>Goals</b>	
<b>Emergency Preparedness</b>	<b>Adaptation</b>	<b>Mitigation/Reversal</b>
<b>Short</b>	<b>Medium</b>	<b>Long-Term</b>
<b>1-3 years</b>	<b>1-5 years</b>	<b>1-5 years and onward</b>
Town & island-wide education effort about our emergency plan & support system (fire, storm & hurricane events)	Identify where back up is critical for water, electricity (ex: shelters, police & fire depts town hall, airport medical center)	Move town towards net-zero carbon emissions
Begin coordination with other towns on climate change preparedness including access to SSA and hospital issues	Analyse how much power needed & best way to provide sustained back up power Find ways to finance and install back ups	Work with Eversource on development of infrastructure for an all-electric island (ie no fossil fuels)
CodeRED	Continue coordination with other towns on climate change issues	Continue work on ways to provide secure, reliable power in times of prolonged outages
complete contact information for residents & businesses	Explore community solar project-at Grange solar for people to buy into for their own power & backup power for town hall during emergencies	Ensure that safe, accessible routes are in place for access to SSA and hospital
CERT training		Continue with stormwater management work ensure that we are prepared for greater flooding
Ensure that planning and support for elderly is in place	Initiate & Participate in town & island-wide planning with Eversource on resilient grid options and ways to provide secure, reliable power in times of prolonged outages	Work on salt marsh and fresh water protection Wetland Restoration as needed to prepare for sea level rise, flooding and storm surge
<b>Homeowner Preparedness</b>		
Provide information about fire, hurricanes, floods	Work on Stormwater Management with Conservation Commission, Highway Dept and State on state and town roads Find way to finance and start work	Move town towards all electric vehicles (for police and fire and for personal vehicles)
Disseminate materials- people know what to do, where our shelters are, how to evacuate when and how to "shelter in place"		Plan and install charging station infrastructure town and island wide
<b>Building Preparedness</b>	Initiate and participate in wildfire/forestry management plans for State Forest and Woods property.	Encourage net zero-energy retrofits of houses and businesses
Provide information about assessing/ preparing your property for greater weather events	Assess other parts of town for fire vulnerability.	Continue with electric conversions with back-up power
offer information about retrofitting homes so safe to "shelter in place" including information about solar, back up, heat pumps (Support Cape Light Compact effort for above at Department of Public Utilities)	work with Planning Board on zoning changes needed in response to greater flooding potential work with MVC on Flood Zone DCPC	Promote further food production, storage, and food waste reduction
form neighborhood groups for storm support	Continue with Homeowner & Building Preparedness	Participate in and promote island-wide planting for pollinators
aim to get at least 2-3 back-up homes in each neighborhood	Encourage more conversion to all electric solar/battery bank/heat pumps	
Promote energy efficiency efforts: greater amounts of insulation, more efficient appliances and lighting and a move towards all-electric	Encourage local food production- home and community gardens, food storage composting and food waste reduction efforts	Work with Finance Committee on ways to do long-term borrowing to finance critical work
Look for grants to finance work	Work with Finance Committee on ways to do long-term borrowing to finance critical work	Look for grants to finance work
